

# Smart Creo Launcher

## Application Overview / Market Segment Introduction:

**Smart Creo Launcher** is a standalone application which will automate Creo Launch, apply appropriate Settings like Module, Standards, library setting, Drawing setting, etc... This application will take all necessary details / information from server & also not required any installation in the client machine.

## **Current State (Without Application):**

- User need to manually determine and configure the required settings / standards for Creo.
- Each time, User have to locate the Libraries of standard parts, symbols, textures, materials, UDF standards.
- By Manually, User need to specify Module/App specific settings & environment settings.

## **Negative consequences:**

- Time will consume for User to manually determine and configure the required settings / standards for Creo.
- If there is any change in Creo settings, need to change Creo settings in all user machines.
- While configuring Creo settings, there may be chance of Manual error while configuring.
- There may be different configuration file backup and configuration settings among the user.

## **Positive Business Outcome:**

- Speed – One click solution to propagate the necessary details.
- Error Free – Eliminates user setting errors.
- Enhanced User Productivity - Eliminate Designer/Creo User's non-productive (manual settings) activities, saving significant time.
- Standardization – Standardization of Process as per company standards and maintains uniformity across the engineering functions.
- Simplify tasks – Easy to maintain Creo standards in server.
- Productivity - Completely configured application including start parts and libraries for productivity.

**How it is better:**

- One-click solution that automatically determines and configure the required settings / standards for Creo.
- Easy of Administration - Any Changes/Updates will be deployed easily on server.
- Works in conjunction with PTC's Windchill / PDMLink
- Creo setting configurator to centralize and use configuration files (config.sup, config.pro, config.win, plot setting, drawing setups, etc.)
- Configures Libraries of standard parts, symbols, textures, materials, UDFs standards.
- Attribute manager for adding parameters.

**Proof Points:**

These are the some of companies working with help of our Creo Launcher.

- Ajax Fiori
- Aditya
- KOEL
- Maini
- Mastercraft
- NBC
- Vaata
- Zamil
